

Because You Can't Manage What You Can't See

scanfeld® saves time and money in daily operations as well as turnaround periods

24/7 Early warning system

- High coverage with just a few sensor units
- Long distance measurements
- Passive measurement working day and night
- Robust operation even in challenging climate conditions

Next generation automated leak detection

- Fugitive emissions monitoring
- Retrospective data analysis for pre-defined periods
- Highest sensitivity by data aggregation
- Precise localization of emission sources

Greenhouse Gas Monitoring

- Reliable detection of typical GHG such as methane, carbon dioxide, nitrous oxide
- Measures several gases at the same time

Natural Gas Liquids Detection

- Monitoring of typical NGL such as ethane, propane, butane, isobutane, alkane
- Measures several gases at the same time

Identifies volatile organic compounds (VOC) as well as hazardous air pollutants (HAP)

Industrial IoT ready

Cybersecurity compliance certified

Server on premise or cloud based

No false identifications, real-time situational awareness

Stop Guessing.
Start Knowing.
